

Hatching Guidelines

All incubators have been disinfected and thermostats set, only minor adjustment may be needed.

Keep incubator away from windows and drafts.

Wash hands before and after turning.

Check water daily.... most concerns are covered in information that may be found on our website.

Remove one vent plug after the 3rd day (please do not lose the plug).

Return incubator to the Cooperative Extension office as soon as possible after the hatch is complete.

Please fill out the enrollment data during registration, it helps us to continue funding the program.
